

DIFF & TRANS BREATHER KIT

Technical Guide

Harrop Diff & Trans Breather Kit is engineered to keep your driveline breathing clean in the harshest environments.

The Kit replaces low sitting factory breathers, and is used to prevent water and contaminants reaching differentials, gearbox and transfer case breathers during river crossings or mud holes.

Featuring a fully sealed system that breathes back into the induction system, eliminating the need for filters that typically can become blocked or clogged. The billet manifold block is mounted into the engine bay of the vehicle and utilizes 4 lines of input, left or right mounting and is suitable as a universal 4WD fit.

Manufactured in Melbourne, Victoria from billet aluminium with black anodised finish, the kit utilizes quality materials to ensure its longevity. The Harrop Diff & Trans Breather Kit replaces factory units that are not optimized for variable off-road environments.

Components included

- 1 x 4-4mm hose joiner
- 1 x 4-8mm hose joiner

- 1 x manifold breather block
- 5 x push on straight connectors
- 1 x push on bulk head connector
- 2 x 1/8"bspt plugs
- 2 x self-drilling screws
- 20 x cable ties
- 8 metres of 6mm black poly tube

Product Specifications

- Manifold breather block is made of Aluminium black anodised finish
- Left or right mounting capability
- 4 line input
- Fully sealed system
- No filters
